DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 2 and 4 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claims 2 and 4, the claim introductions (i.e. "the exterior surface" and "an alternative variation") are not proper and are not in conformance with independent claim 1. The claim must read --The building block of claim 1-- or --the one story high block of claim 1-- or something similar.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 4 are rejected under 35 U.S.C. 102(b) as being anticipated by US Patent #3,968,615 to IVANY. IVANY discloses a one story high reinforced (21,22) concrete building block (B) including a hollow space (C) with means (the walls 10,11,13) for housing insulation (the concrete) and an attachment means (18,19) for attaching

adjacent blocks. In reference to claim 4, the interior surface includes a precast shelf (in the form of notches 15n).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over US Patent #3,968,615 to IVANY in view of US Patent # 4,644,719 to SALAZAR. IVANY discloses the basic claimed building block except for coloring the exterior surface. SALAZAR teaches that it is known in the art to color the concrete in order to have a colored exterior surface. Hence, it would have been obvious to one having ordinary skill in the art at the time the invention was made to color the blocks in order to have an aesthetically pleasing exterior surface.

Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over US Patent #3,968,615 to IVANY in view of US Patent #4,771,584, figure #4, to BEARD et al. IVANY discloses the basic claimed building block except for explicitly detailing the ability of the block to form windows and doors. BEARD et al. teaches that it is known in the art to use a building block (11,13,15) to form a door (14). Hence, it would have been obvious to one having ordinary skill in the art at the time the invention was made to use the block of IVANY to form a window/door, as taught by BEARD et al. in order to provide the assembly with access to the exterior of the structure while enhancing the circulation of air therethrough.
